IDENTITY-BACKED AGENT PAYMENTS

AGENT PAYMENT GATE

PITCH STEP 01 / 04

THE SOLUTION

A verified person. A narrow permission. Real settlement.

Didit verification links a person to signed spending consent. OpenZeppelin policies enforce one merchant, 2 XLM per payment and a 5 XLM rolling budget. The owner can revoke access.

Proven on testnet: payments, refusals, invoice reuse and revocation.

PITCH STEP 02 / 04

PMF

A wallet key cannot express what a human allowed.

Agent-commerce builders need bounded spending and clear receipts.
Owners need control over the recipient, amount and expiry.
Our first use case: agents purchasing paid APIs or merchant services.

Working prototype; customer discovery is next. No traction claimed.

PITCH STEP 03 / 04

TECHNICAL WORKFLOW

Verify → sign consent → enforce policies → pay → revoke.

Didit → signed wallet binding → OpenZeppelin smart account.
Soroban policies restrict recipient, per-payment amount and budget.
SQLite preserves invoice receipts; unknown results use the original hash.

Testnet: 1 + 2 + 1 XLM settled; cap, recipient and budget refused.
